

What is combination nicotine replacement therapy (NRT)?

Combination NRT is the use of a nicotine patch, to provide nicotine for all day craving control, along with a fast-acting flexible format for fast craving relief.

What is the benefit of combination NRT?

- Combination NRT has been shown to be more effective than the use of a single NRT product – smokers are 25% more likely to quit smoking using combination therapy versus single NRT.
- Combination NRT for smokers who want to quit is recognised by NICE and the National Centre for Smoking Cessation and Training as a way to quit.

Things to ask individuals looking to quit/try combination treatment:

- Are you a heavy smoker?
- Have you failed to quit in the past using a single NRT product?

How to explain combination therapy to a consumer:

- You can maximise your chances of quitting for good* by using the **patch for all day support** and a flexible NRT product like NICORETTE® QuickMist Mouthspray, NICORETTE® Gum, or NICORETTE® Lozenge for extra support when those intense cravings strike.

*vs patch alone.

Benefits of quitting smoking to share with your consumers:

These are just a few of the many health benefits you could experience when you quit smoking:

72 hours
after quitting

Your breathing may become easier and your energy levels could increase

2–12 weeks
after quitting

Your blood circulation could improve, which can help to make your day-to-day physical activities easier

10 years
after quitting

Risk of lung cancer falls to around half that of a smoker
